Making their mark in a man's world

By WENDY JACK

Vicky Holmes has just graduated from the University of Glasgow with a degree in civil engineering. She is one of the first women to achieve this prestigious degree in Scotland. Vicky is now working as an engineer on a major construction project in London. Her colleagues have praised her for her hard work and dedication, and she has already made a significant contribution to the project.

Helen Morton is another woman who has broken traditional barriers. She is the first woman to complete a PhD in civil engineering at the University of Edinburgh. Helen is now working as an engineer in a leading consultancy firm in London. Her work has been recognised with several awards, and she is considered a role model for other women in the industry.

Wilma Harper has also made her mark in the engineering world. She is the first woman to achieve a chartered status in civil engineering in Scotland. Wilma is now working for a leading engineering firm in Edinburgh, where she has been instrumental in securing several major contracts. Her success has inspired many other women to pursue careers in engineering.

The rising number of women in engineering is a positive sign for the industry, and it is hoped that this trend will continue. With more women entering the field, there is a greater chance of diversity and innovation. As these women continue to achieve success, they will inspire others to follow in their footsteps and break down the barriers that have traditionally kept women out of engineering.
